

## ENGLISH LISTING:

Monopoly - the legendary board game that tests friendships and that no one has probably ever played to the end without leaving the board in anger at least once - is the inspiration for this multi-cache.

But don't worry, now there is the more relaxed version, basically the little sister called:  
**Heidelschnopoly**

Here you only have to survive 31 moves - less drama and a lot more fun!

This cache takes you on a journey through the familiar and perhaps surprising corners of Heidelberg, probably the most beautiful city in the Rhine-Neckar region. With its 31 stations, it's definitely not a quick-and-go find. So plan enough time - whether on foot, by bike or by bus or train - and be prepared for an adventure that lasts longer than a throw on the "go" fields.

The streets and locations specified do not have to (and cannot) be visited in the original board order. Instead, we have sorted the game into individual areas that you can unlock one after the other.

At each station you will find information about the respective location or area. At each station you will also find a question that always has a single-digit number as an answer and brings you a little closer to your goal.
